- Dimming:** Dimming options available for every color choice
- Scenes:** Customizable scenes options with up to 8 colors per scene
- Compatibility:** Compatible with Amazon's Alexa and Google Home*
- Music:** The lights will follow music collected by a phone microphone.

*Bluetooth Gateway (CX-BTG) is required

To get instructional videos, tutorials, and installation guides please visit: coronalighting.com/url/btlearn

Step 1: Download the App

The Bluetooth app is available on the APP store (IOS) for Apple Devices and on the GooglePlay Store for Android Devices. Search “Corona BT” to download the app (app icon is shown on the left). You may also scan the QR code to be directed to the download page.

Step 2: Identify Your Light Bulb

(2a) Bluetooth must be enabled on the device with the Corona BT app, and the Light Bulb needs to be in pairing mode(2b). The Corona BT app will auto-discover the Bulb after it's powered on . An icon of the device with its part number will display once it's been identified. Tap the add button to connect it to the app.

(2b) The Light Bulb is in pairing mode when the light is flashing, after it's plugged in. If the light is solid you need to reset the device to access pairing mode. To reset the bulb firmly press the reset button until you feel a 'click', repeat six times.

Step 3: Control your Light Bulb

(3a) To control all of the products at once: first tap the Light Bulb's icon, next tap the pencil icon on the top right corner, then tap on “Create Group”. After creating the group, you can add any of your devices to the same group. Once they are grouped you can control them together. To control an individual fixture, long press on its icon.

(3b) Tapping on “White” tab above the app screen will bring up the options for controlling the white color temperature of the LED module. There are 6 presets: 2200K, 2700K, 3000K, 4000K, 5000K and 5700K. You will also find a color wheel for customizing your own light temperatures. The slider on the bottom of the screen will adjust the brightness; sliding left will make the light dimmer, and sliding right will make the light brighter.

(3c) Tapping on “Color” tab above the app screen will bring up the options for controlling the RGB colors. There are 9 presets: Red, Green, Blue, Purple, Amber, Turquoise, Pink, Magenta and Aqua. A color wheel is also available for customizing your own RGB colors. There are also 2 sliders on the bottom of the screen. The top controls the brightness, and the bottom adjusts the hue and saturation. Sliding left will make the light dimmer, and sliding right will make the light brighter.

(3d) Tapping on the “Scene” tab above the app screen will bring up the options for changing the light to a preset scene. There are 8 preset scenes to choose from. The light will automatically cycle through each of the scene's preset colors. If you long press a scene, you will be able to edit the scene color, color flash mode (static, flash, breath) and the slider on the bottom of the screen will change the speed the colors slide through the scene. Sliding left will slow down the cycle, and sliding right will speed up the cycle.

(3e) Tapping on the “Music” tab above the app screen will bring up the options for the advanced music mode. The lights will change its color and brightness following the music collected by the microphone. There are multiple preset functions to choose from, customize multiple different actions and colors in music scenes, control the brightness rhythm by with decibel or tone while adjusting the decibel (dB) max/min value.
